Visual Geographic Mapping System

Street 360°

Visual Geographic Mapping System

Street 360 is a visual mapping system. Visual mapping is the ability to connect between the map and the visual from the field. The Visual Map is a high resolution 360 panorama pictures combined in such way that allows the user to "walk the street" by pressing the map or the picture. The user can look at any direction, zoom in on objects of his interest and "walk" around the area as if he is there.

Main Uses

- Intelligence gathering.
- Visual Mapping of cities, towns, trails and open areas.
- Visual mapping and documentation of strategic facilities from the inside and outside.
- Visual Mapping and documenting inside of buildings before disaster such as earthquakes or hurricanes.
- Documentation of crime scenes / disaster areas.

The system includes:

- Computerized photography unit.

Processing Unit:

- Panoramic processing software with GPS synchronization.
- Server software for locally or remotely panoramic view on a map.
