

## X95 (Assault Rifle / Carbine / SMG) (5.56mm / 9x19mm)

### One Rifle, Two calibers

- Training on a single weapon
- Multitask operability
- Combined logistics

The X95 is the Special Forces firearm of the next small arms generation. The X95 was developed in close cooperation with elite units and was tailored to their specific requirements and needs. The X95 was created to deal with modern threats of anti-terror, urban and open area combat all in one mission.

The X95 is the standard IDF (Israel Defense Forces) Assault Rifle.

The X95 incorporates advanced technology that allows the conversion from 5.56mm caliber to 9mm caliber and vice versa. This leap in technology enables the soldier to use the same weapon platform for a wide array of scenarios.

This capability saves training time, spare parts and also reduces overall costs.

The conversion may include a silencer for both calibers, thus distinguishing itself as the ideal weapon for Special Forces dealing with complicated situations.
