One of the most important parts of a strong and capable army is its Ground Forces. The Ground Forces take under it several corps and each is handling another aspect of the warfare. In most cases the GF are divided in to: Infantry, Armored, Field Intelligence, Engineering and Artillery.

The infantry for example are designed to secure hostile perimeters for the safety of the citizens, fight through open and urban areas while thriving to achieve dominance with as fewer casualties as possible, direct Tanks and mark ground targets for the Air Force. These are the exact soldiers that look straight at the enemy's eyes.

Our extensive background, both on the operational aspect as well as rich experience in providing training and supplying the best line of equipment for the Ground Forces, enables us to take part in the design and development of advanced tactical equipment designated for the operational needs of the different GF corps.

Collaboration and long-years relationships with Armies throughout the world continuously contribute to our ability to offer state-of-the-art tactical equipment to our clients. In addition, our military training division personnel are assembled from operational units and are highly experienced in military training and have knowledge in a wide range of tactical situations such as - CQB, open area warfare (desert, maritime, jungle), urban combat etc.

TAR also provides strategic consultation on different issues related to Ground Forces.
